

The videogame life-tracking app I am designing will be aimed at teens and young adults trying to break videogame addiction. It will track the amount of time users spend gaming each day, and keep track of weekly statistics. Users can also choose to track the type of games they play. The app will show user data in a clear and concise way that is very simple to understand.

I will execute this process using charts and easy to find buttons. The app will allow users to import their data from an outside source should they wish to do so, and also give them the ability to manually input data or track data through the app itself.

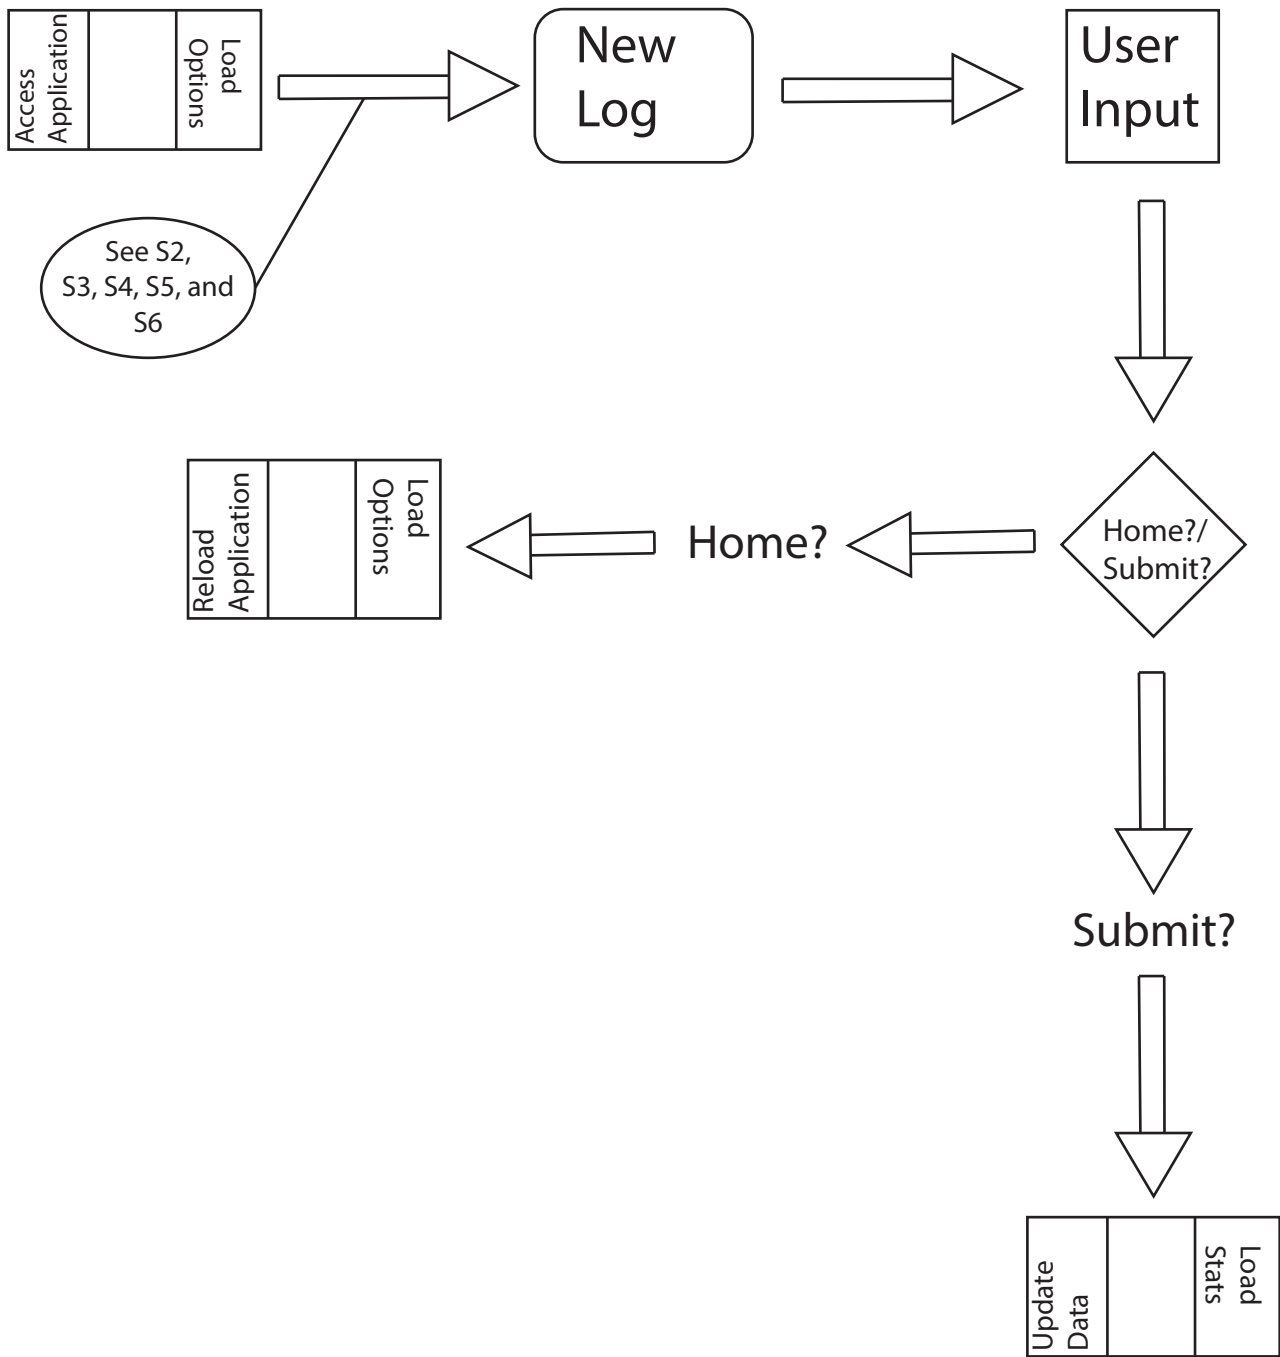

My design scenario is for users between the ages of 13 and 29 to track their behavior regarding gaming, and to be able to set goals to complete in order to break bad habits and addiction. The app should be able to easily help users succeed in their goals by using alerts, timers, charts, and the ability to set custom time or game type goals.
